Lavoisier in Perspective

Antoine Laurent Lavoisier

geb. in Paris am 26. August 1743

gest. in Paris am 8. Mai 1794

Seine Methode systematischer Quantifizierung, seine analytische Definition des Elementbegriffs und seine Theorie des Verbrennungsprozesses leiteten die 'Chemische Revolution' ein. Chemie und Physiologie verdanken ihm ihre moderne Gestalt.

Sa méthode de quantification systématique, sa définition analytique de la notion d'élément et sa théorie nouvelle de la combustion ont été à l'origine de la 'Révolution Chimique'. La chimie et la physiologie lui doivent leur forme moderne.

His method of rigid quantification, his analytical definition of an element, and his new theory of combustion initiated the 'Chemical Revolution'. Chemistry and physiology owe to him their modern forms.

Table of contents

WOLF PETER FEHLHAMMER	
Preface	7
MARCO BERETTA	
Introduction	11
ANGELA BANDINELLI	
A.-L. Lavoisier and P. S. Laplace (1783). A New Course in Physics.	19
PETER HEERING	
Weighing the Heat: The Replication of the Experiments with the Ice-calorimeter of Lavoisier and Laplace	27
JOHANN PETER PRINZ	
Lavoisier's experimental Method of his Research on human Respiration	43
TREVOR H. LEVERE	
Lavoisier's Gasometer and Others. Research, Control, and Dissemination	53
JEAN-PIERRE POIRIER	
Lavoisier's Balance Sheet Method. Sources, Early Signs and Late Developments	69
KEIKO KAWASHIMA	
Madame Lavoisier. The Participation of a Salonière in the Chemical Revolution	79
FERDINANDO ABBRI	
Some Ingenious Systems. Lavoisier and the Northern Chemistry	95
ALFRED NORDMANN	
Lavoisier's and Lichtenberg's Enlightenments	109
PATRICE BRET	
Power, Sociability and Dissemination of Sciences. Lavoisier and the Learned Societies	129
CHRISTOPH MEINEL	
Demarcation Debates. Lavoisier in Germany	153
MI GYUNG KIM	
Lavoisier, the Father of Modern Chemistry?	167
MARCO BERETTA & ANDREA SCOTTI	
Panopticon Lavoisier. A Presentation	193
Index of names	208
